

Device-level energy management solutions for commercial buildings

Overview

Reduce energy consumption and optimise facility maintenance

Through patented wireless sensor technology and an energy analytics platform, Panoramic Power[®], part of Centrica Business Solutions, drives energy savings and facility operational optimisation:

- Predictive maintenance
- Failure detection and diagnostics on critical equipment
- Intelligent retrofits
- Pinpoint real-time energy savings

Key points

Preventative maintenance:

Identify unseen problems and predict failures and operational anomalies through real-time alerts

Real-time energy monitoring:

Reduce energy waste and increase machine reliability. Detect off-hour consumption and benchmark units to detect inefficiencies

Comply with energy disclosure laws:

Monitoring with granular energy data and historical reports
