

Energy Insight solutions for manufacturing Panoramic Power[®]

Device-level energy management solutions for manufacturing

Delivering granular visibility into all devices and systems

Panoramic Power[®]Energy Insights, our patented wireless self powered sensor technology and energy analytics platform, drives energy and facility operational optimisation:

- Advanced failure detection and diagnostics on critical devices
- Reduce maintenance costs
- Optimize production processes
- Pinpoint energy savings

Key points

Preventative maintenance:

Identify unseen problems and predict failures through real-time alerts

Operational cost reduction:

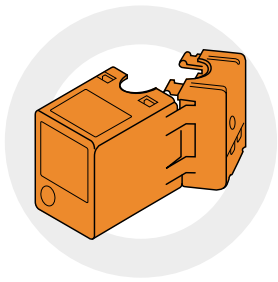

Quickly determine through unit benchmarking when systems are not functioning properly to detect hidden operational inefficiencies and energy waste

Real-time energy monitoring:

Increase machine reliability and improve maintenance schedules
